

DEPLOY_SEQUENCE: Identity v3.0

Design is not decoration; it is structured intention.

```
const PORTFOLIO = {  
  id: "A00153068",  
  name: "Kira Zakirov",  
  role: "Senior Frontend Engineer",  
  positioning: "Engineer with Aesthetic Discipline",  
  approach: "System-based design",  
  deployment: "https://folio-kiraz.vercel.app",  
  target: "Canva – Senior Frontend Engineer (ANZ)",  
  resume: "KiraZakirova_CV.pdf (separate file)",  
  linkedin: "linkedin.com/in/kira-zakirova-4bbb04a9"  
};
```

This portfolio is constructed as a system demonstration – not a visual showcase.

Portfolio Architecture

A modular React SPA. Each module operates independently – composable, scalable, consistent across viewports.

// ROUTES

- / → Hero – Blueprint canvas (interactive, from A2)
- /experience → 8 roles, 10+ years, master-detail pattern
- /about → Personal narrative + value proposition
- /degree → 21 subjects, 10 completed, with PDFs
- /art → Drawings & k-Bag carousels
- /work/:id → Case study deep-dives

// STACK

React 19 | TypeScript | Vite | Material UI | Redux Toolkit | React Router

Framer Motion | HTML Canvas | Vercel

// DEPLOYMENT

folio-kiraz.vercel.app – live, responsive, CI/CD on git push.

// COMPONENT TREE

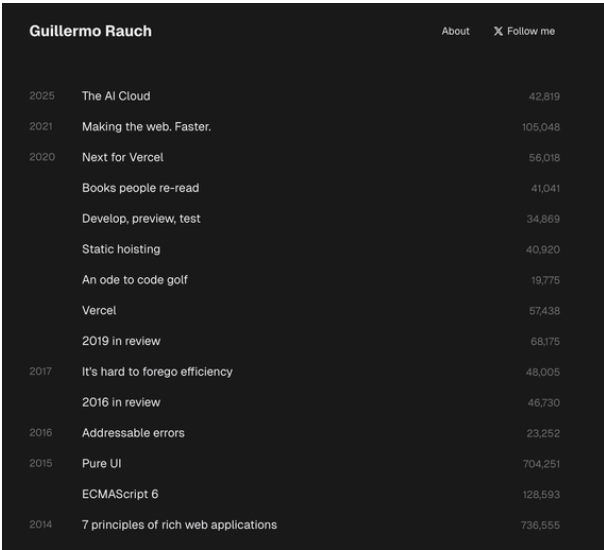

```
<App>
  <ThemeProvider>
    <Router>
      <Layout>
        <Navigation />
        <Routes>
          <TeaserPage /> // /
          <ExperiencePage /> // /experience
            <ProfilePanel />
            <CompanyList />
            <DetailCard />
          <AboutPage /> // /about //
          <DegreePage /> /degree
            <CourseGrid />
          <ArtPage /> // /art
          <CaseStudy /> // /work/:id
        </Routes>
      </Layout>
    </Router>
  </ThemeProvider>
</App>
```

Industry Research & Distribution

Inherited from A1: 3 engineers researched as positioning anchors.

// GUILLERMO RAUCH

Founder of Vercel · clarity over noise
rauchg.com — quiet, confident, ideas only
Public thinking on X — small posts, sharp ideas, GitHub — his work is the proof

Guillermo Rauch		About	Follow me

Pattern: own domain + OSS + social.
No LinkedIn-first.

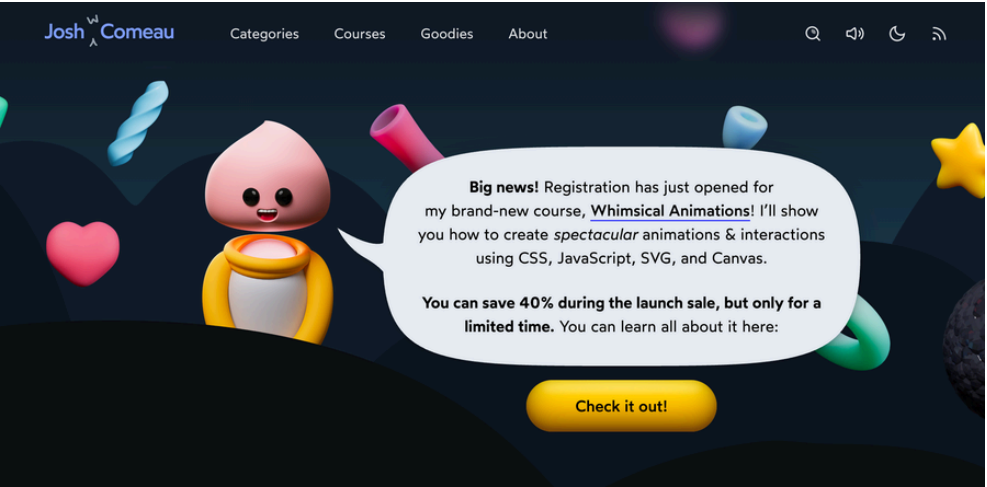

<https://rauchg.com/>

// PATTERNS APPLIED TO MY DISTRIBUTION

LinkedIn as primary channel — ANZ recruiters search there first
Own domain as proof surface — folio-kiraz.vercel.app demonstrates the claim
Site-as-demonstration — portfolio proves React/TS skill in the medium itself

// JOSH COMEAU

Independent creator · learning through play
joshwcomeau.com — the blog itself feels alive
Newsletter — talks to readers directly
Courses — turns what he knows into a product

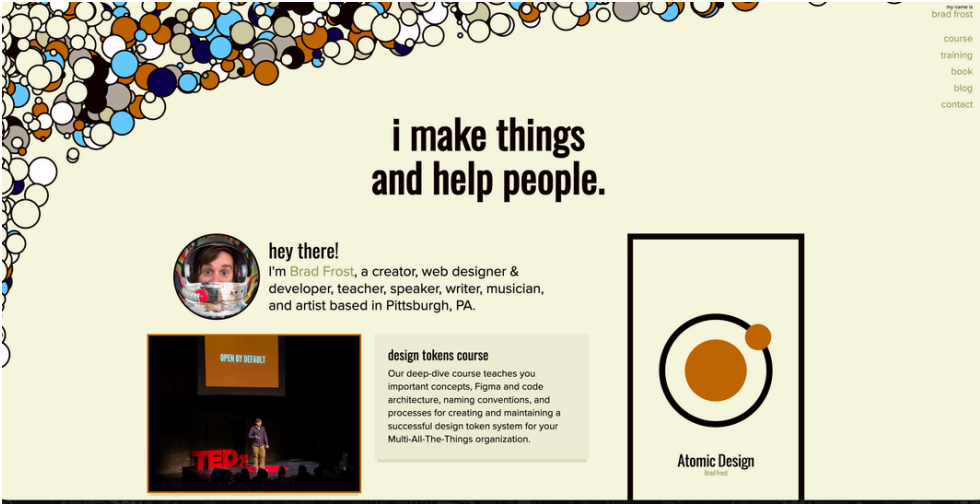

Pattern: site-as-demonstration.
The blog proves the skill.

<https://www.joshwcomeau.com/>

// BRAD FROST

Independent voice · one big idea, deeply explored
bradfrost.com — written for over a decade
Atomic Design — a whole book lives as a website.
Speaks at conferences — visible, trusted

Pattern: depth over reach.
One canonical idea.

<https://bradfrost.com/>

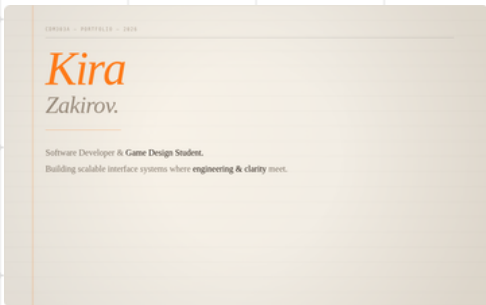

GitHub for technical credibility — code visible, not just described
Direct email outreach — high-intent cold contact for target roles
One canonical idea — "Engineer with Aesthetic Discipline" repeated across every surface

From System to Page Layouts

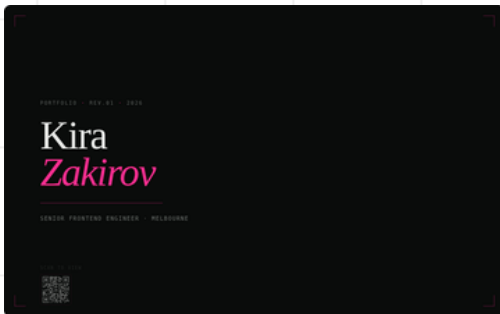

Concepts before code. Wireframes before pixels.

// SYSTEM SELECTION (A2)

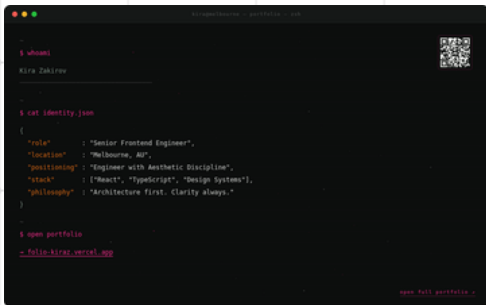

EDITORIAL

SCAN

TERMINAL

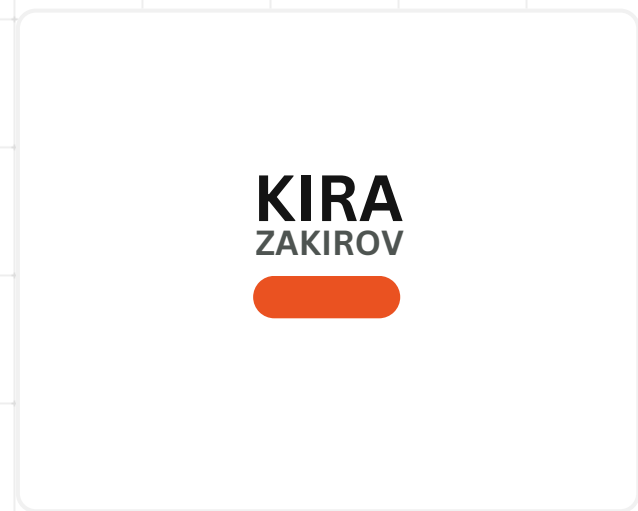

BLUEPRINT ✓

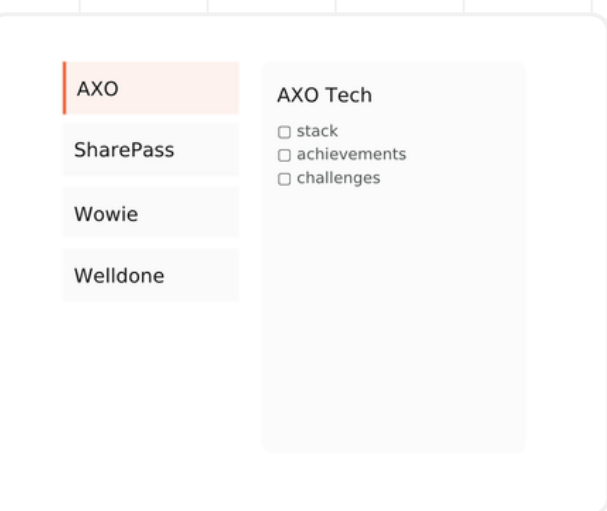

// WIREFRAMES

WF-01 · HERO

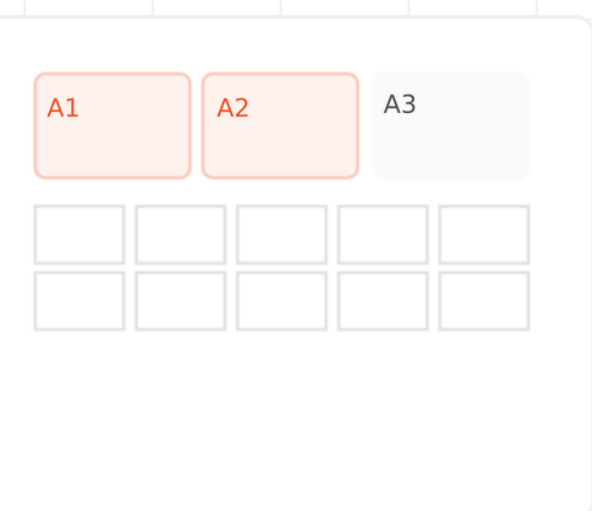

Centred typography.
Animated coordinates.
Replay control.

WF-02 · EXPERIENCE

Master-detail.
Scan or read by depth.

WF-03 · DEGREE

Assessments + 21-subject grid.

// IA DECISIONS

- Hero filters audience before content
- Experience before About — recruiter scan-pattern
- Case studies as detail layer, not scroll-bombing
- Persistent left nav, breadcrumbs on detail pages

Wireframes resolved layout decisions before code.

By the time React components were written, every choice (master-detail, card-grid, hero-with-CTA) was already committed.

Three wireframes shown — Hero, Experience, Degree. About, Art, and Work were resolved directly in REV.01 from these established patterns.

REV.01 → REV.02 → REV.03

Three revisions. One coherent system.

// REV.01 – STRUCTURE

Goal: get the routing skeleton live.

Built: 5 routes, basic layout, MUI theme tokens, hero placeholder.

Limitation: static hero, flat lists. Felt like an admin panel.

"It works, but it doesn't feel like anything yet."

// REV.02 – VOICE

Goal: inject Blueprint identity.

Changed: hero rebuilt with HTML Canvas (carries A2 teaser forward as the actual entry point);

Master-detail applied to Experience;

The dotted grid was introduced as a system signature.

"Looks right. Doesn't sound right yet."

// REV.03 – TONE

Goal: rewrite human content. Apply industry feedback.

Changed: About in the first person. Achievements lead with action verbs. Tech- stack icons added.

Result: finally speaks like a senior engineer, not a CV bot.

"Ship it."

// SYSTEM EVOLUTION ACROSS ASSESSMENTS

v1.0 – A1 / Identity

- "Engineer with Aesthetic Discipline"
- 2 mood boards, 3 target orgs
- 3 professionals: Rauch, Comeau, Frost

v2.0 – A2 / Teaser

- 4 system concepts → Blueprint selected
- Interactive HTML Canvas teaser deployed
- Cover letter to Canva, distribution architecture

v3.0 – A3 / Final

- Full portfolio website built
- 4 case studies, brand-aligned resume
- A1 feedback gap closed (platform analysis)

Hero & About – Live Pages

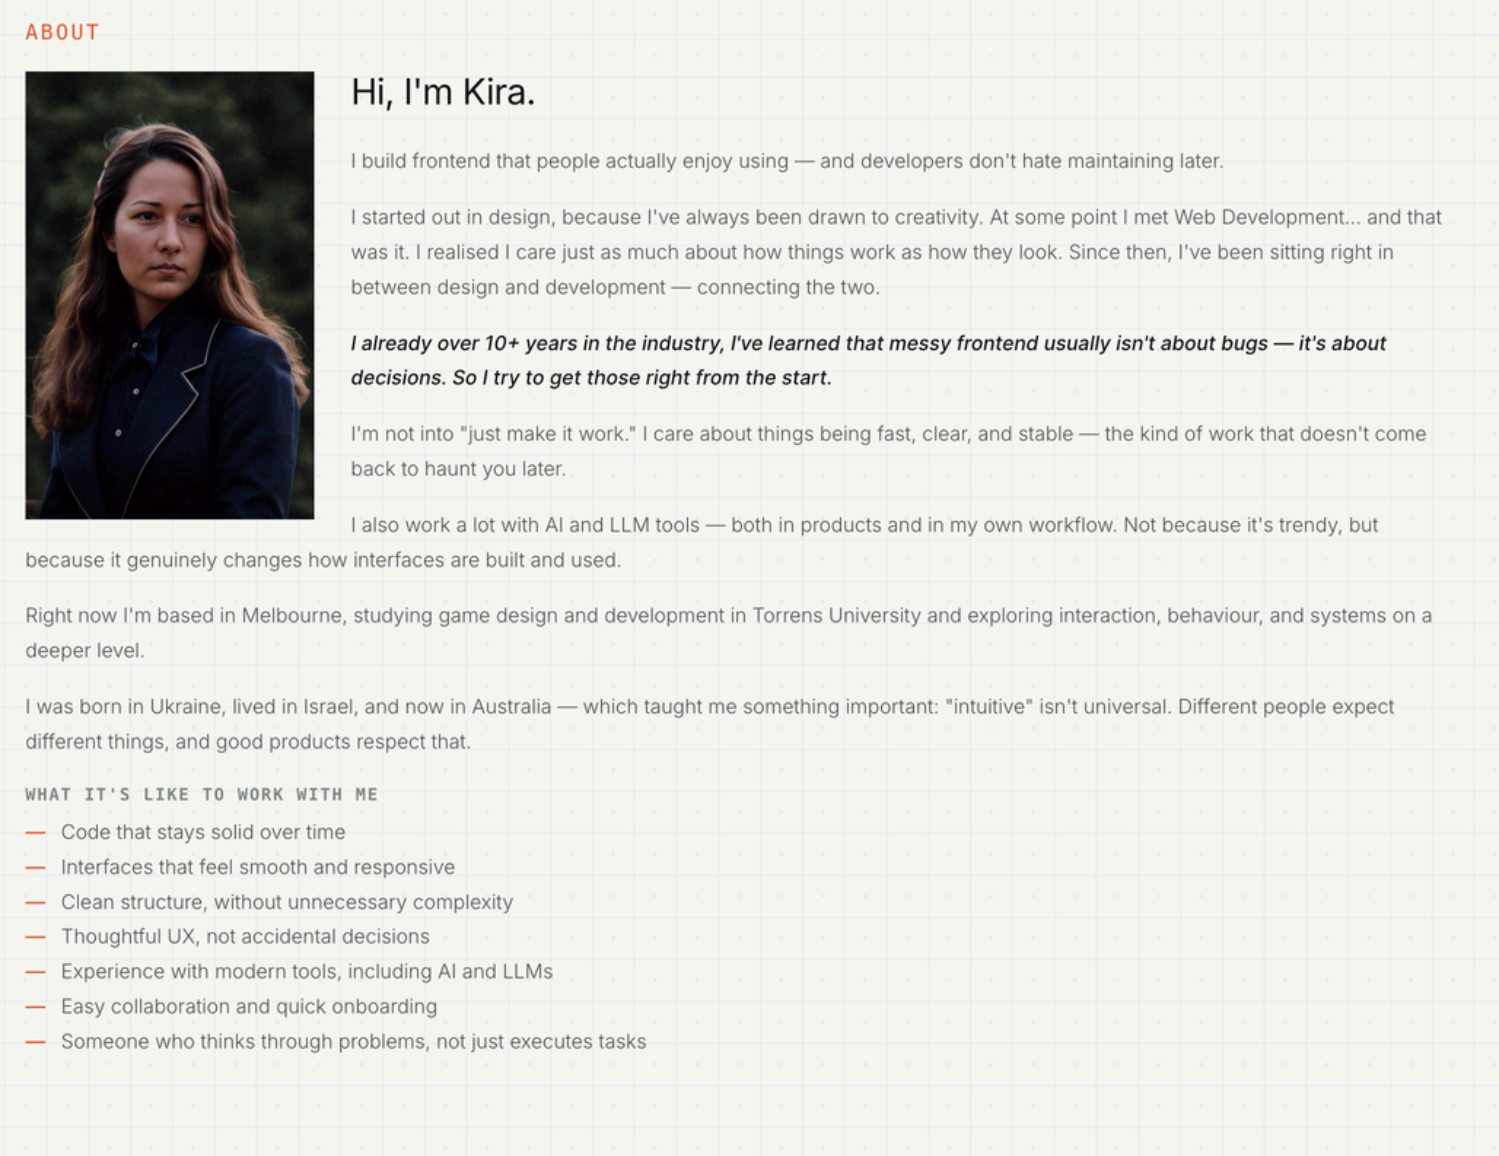

Live portfolio. Real screenshots.

// HERO

HTML Canvas with mouse-responsive coordinates. The A2 teaser is the live landing page – not a separate artefact.
Animated construction lines, replay control, "Enter Portfolio" CTA.

// ABOUT

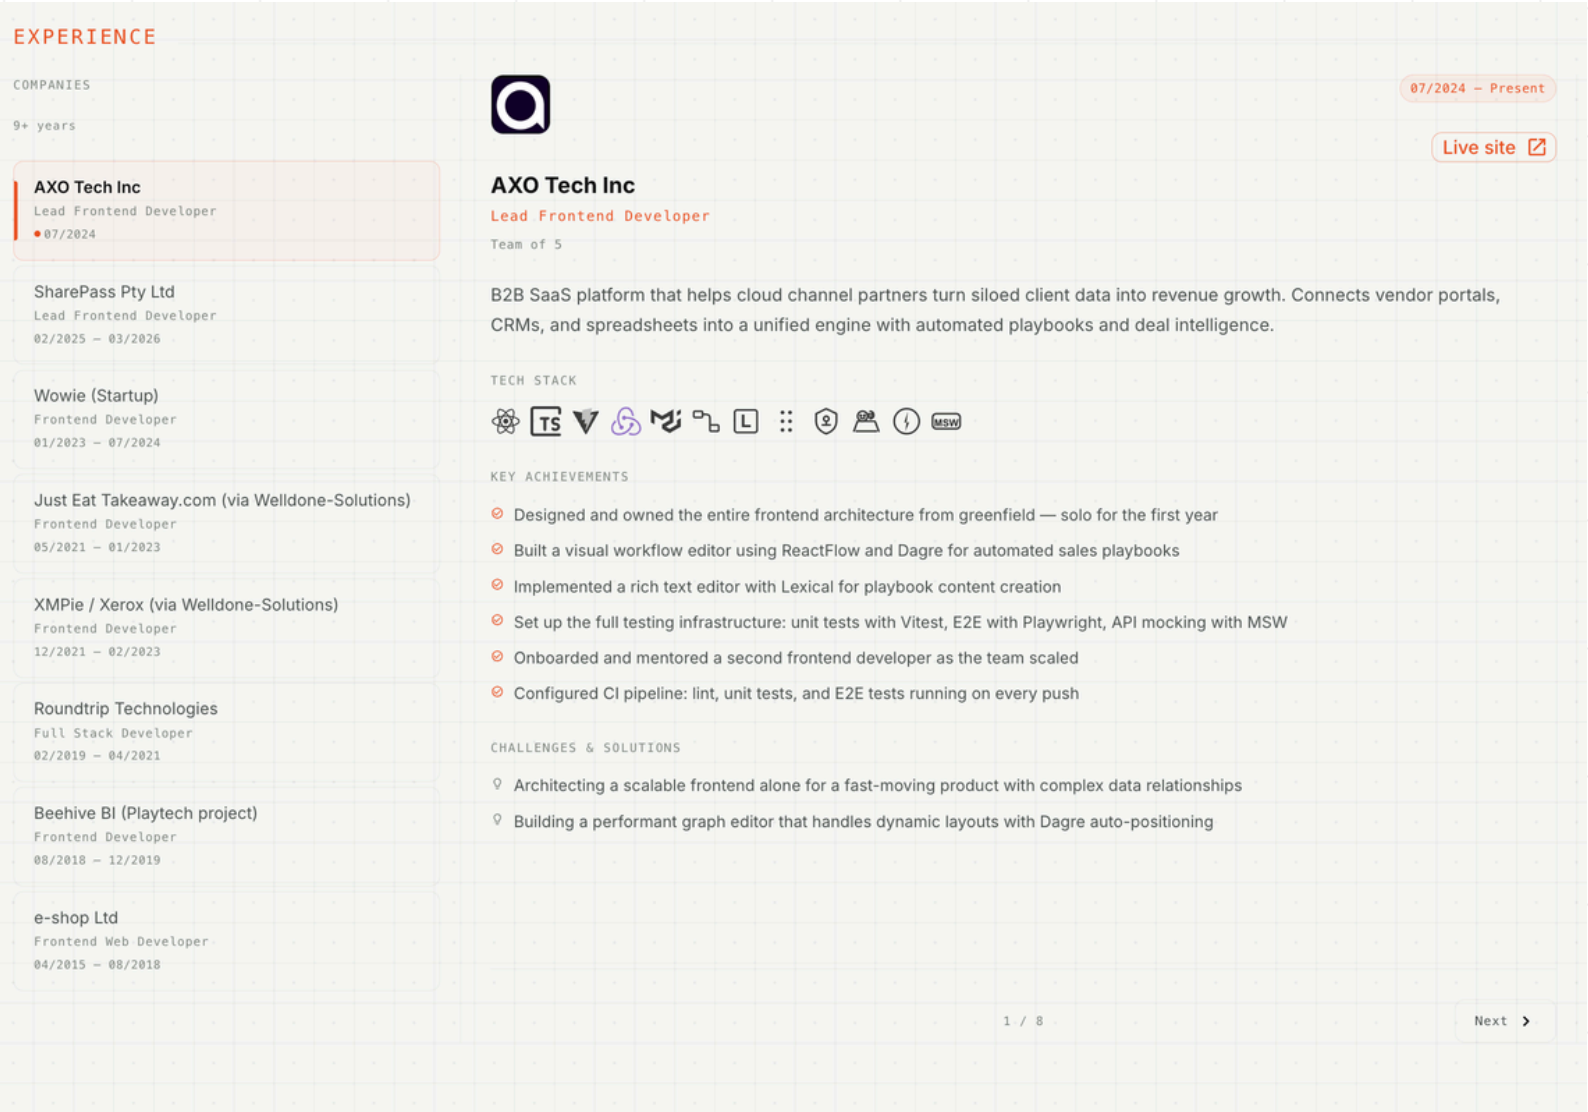

First-person voice rewritten in REV.03. "I build frontend that people actually enjoy using — and developers don't hate maintaining." Outcome-language, not jargon.

Experience & Degree – Live Pages

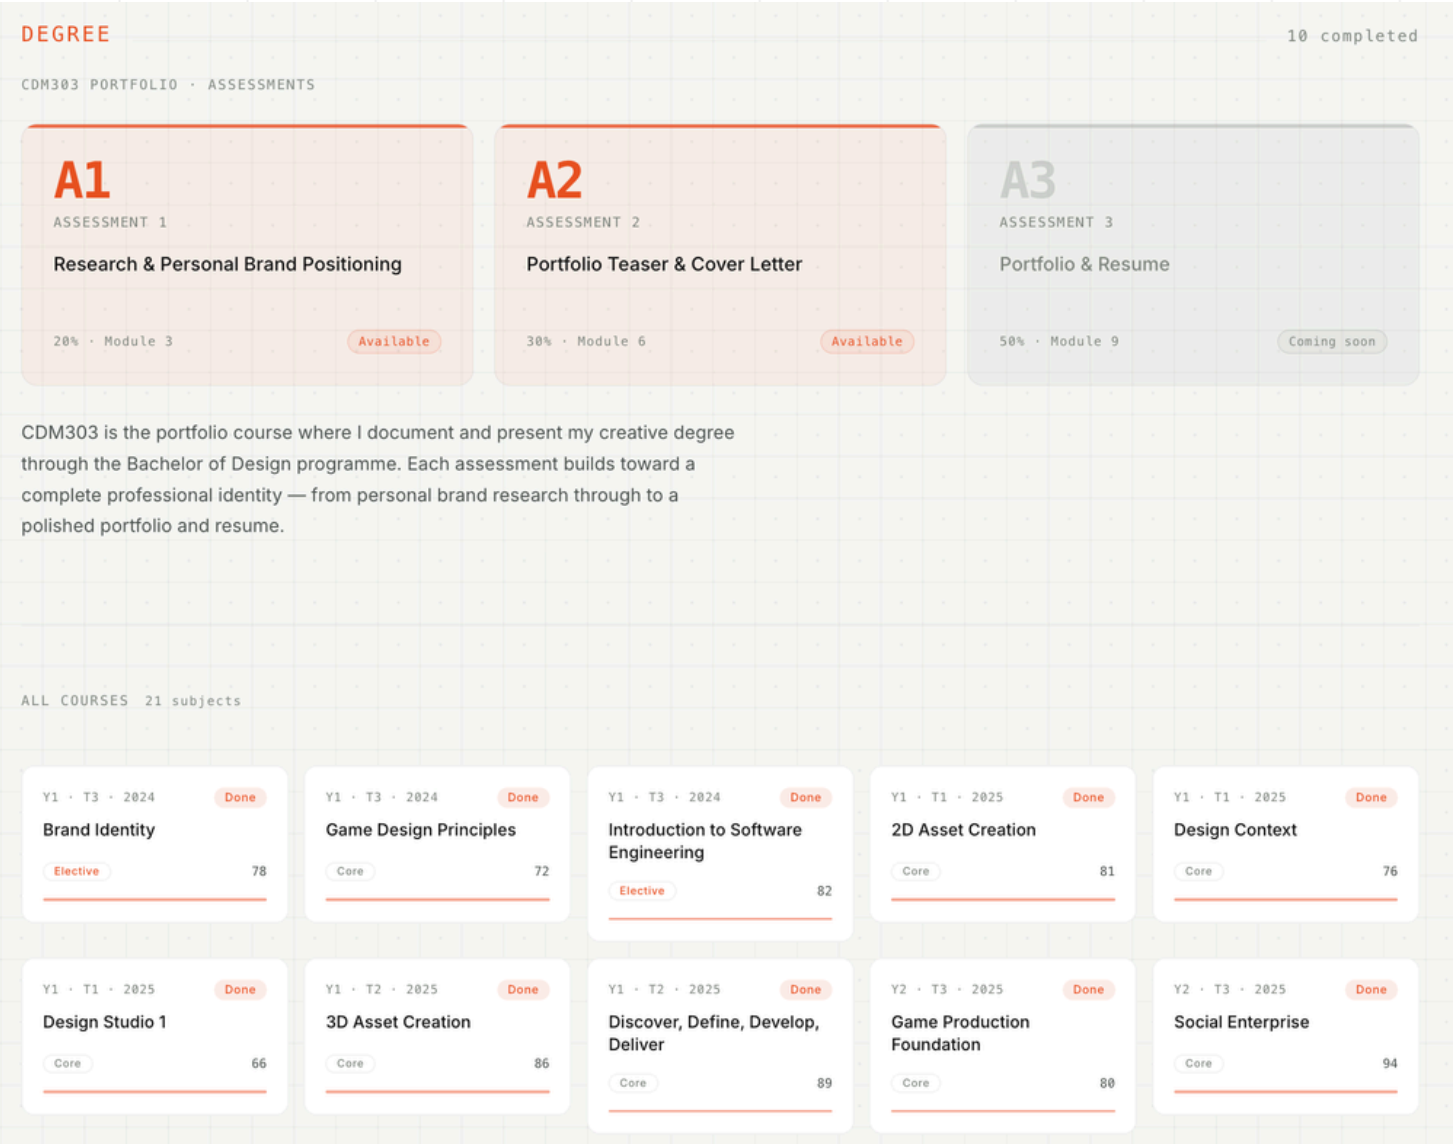

Master-detail at the macro. Card grid at the micro.

// EXPERIENCE

8 companies · 10+ years. Master-detail layout — scan in 30 sec or read 10 min, all of them. Tech-stack icons, action-verb achievements, and live site links are added where possible.

// DEGREE

3 CDM303 assessments anchor the page · 21 subjects · 10 completed. Range 66–94. Each project links to a detail page with an embedded PDF.

AXO Tech & SharePass

Production-grade frontend. Solo & lead.

// AXO TECH INC

Lead Frontend · 08/2024 – Present · Team of 5 · Part-Time

B2B SaaS platform connecting cloud channel partner data into automated playbooks and deal intelligence.

// APPROACH

- Greenfield architecture, solo for the first year
- Visual workflow editor – ReactFlow + Dagre auto-layout
- Rich text editor – Lexical for playbook content
- Testing infrastructure: Vitest + Playwright + MSW
- CI pipeline: lint + unit + E2E on every push

// OUTCOME

Performant graph editor with dynamic layouts. Codebase remained maintainable as the team scaled from 1 to 2 frontend engineers.

// SHAREPASS PTY LTD

Lead Frontend · 02/2025 – 03/2026 · Team of 3 · Part-Time

Enterprise-grade secure secret-sharing platform. Solo on frontend, part-time. Production deadline. No designer.

// APPROACH

- Front-loaded architecture: React + TS + Vite + Redux Toolkit + MUI
- Client-side encryption via SJCL + @noble/hashes
- MFA flow with TOTP + QR-based security keys
- Token refresh hardened with async-mutex
- Full UI/UX in light + dark modes – no designer

// OUTCOME

Production-grade enterprise app. Frontend cited by customers as a reason to switch from competitors.

Visuals withheld under NDA

// SHARED TECH

React TypeScript Vite Redux Toolkit Material UI SJCL ReactFlow Dagre Lexical Vitest Playwright MSW

PoopLoop & EchoForge

University work that broadens the surface.

// POOPLOOP MELBOURNE · SOCIAL ENTERPRISE

Y2 T1 · 2025 · Score: 94 / 100

Brief: design a real-world social enterprise for Melbourne with a sustainable business model and validated research.

// CONCEPT

Reframes pet waste as a circular-economy input. Smart bins process waste into biogas + fertiliser; data feeds a council dashboard. The waste becomes a measurable, monetisable resource – not a cost line.

// MY APPROACH

- Interviewed dog owners + council waste-management staff
- Stakeholder mapping + service blueprint
- Brand system: naming, palette, typography, logo
- Investor-grade pitch deck

// WHY IT SCORED

Specific revenue streams (biogas + subscription + carbon credits), production-grade visual identity, real measurable problem.

// ECHOFORGE · PIXEL-ART PLATFORMER

Y2 T3 · 2025 · Score: 80 / 100
· Game Production Foundation

Brief: ship a complete game – concept, mechanics, art, code, deployment – within a trimester.

// CONCEPT

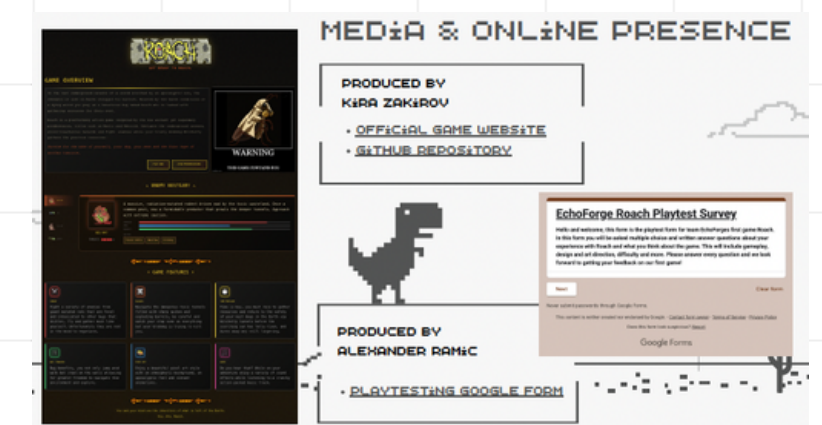

2D pixel-art platformer set in apocalyptic underground caverns. Player controls a tenacious dog gathering resources for the nest. Inspired by classic Mario / Metroid platforming, with a darker tone.

// SCOPE

- Complete platformer mechanics + level design
- Pixel-art assets – character, environment, enemies
- Game loop with progression, win/lose states
- Deployed and playable in browser

// WHY IT'S HERE

Game-feel taught me a different mental model. Loading states, transitions, micro-interactions – all closer to game-feel than data flow. Skill transfers in both directions.

Resume & LinkedIn – Companion Assets

One identity.
Three surfaces.

The portfolio is the primary asset. The Resume and LinkedIn profile are companion surfaces that translate the same content into formats hiring managers expect by default.

Experience

Lead Frontend Engineer – AXO Tech Inc | Aug 2024 – Present | Remote (Part-Time)

- Designed and implemented frontend architecture from scratch, defining scalable structure and state management patterns.
- Built reusable component system to improve maintainability and UI consistency.
- Optimized rendering performance through architectural refactoring.
- Established code review standards and improved code quality.
- Collaborated with backend and product teams to deliver production-ready features.

Lead Frontend Engineer – SharePass Pty Ltd | Feb 2025 – Mar 2026 | Remote, Australia

- Led end-to-end frontend architecture for a secure web platform.
- Designed scalable UI systems focused on performance and long-term maintainability.
- Implemented modular component library to reduce duplication.
- Integrated REST APIs and authentication flows.
- Applied testing strategies to ensure production reliability.

Frontend Engineer – Wowie | Jan 2023 – Jun 2024 | Remote

- Developed core React Native features with Firebase integration and refactored state logic to ensure stable Agile releases.

Frontend Engineer – Welldone-Solutions (CodeValue) | Feb 2021 – Jun 2023 | Hybrid

Just Eat Takeaway.com

- Developed reliable B2B2C fintech interfaces within enterprise-scale systems and cross-functional teams.

XMPIe

- Enhanced frontend architecture by building reusable modules for multi-layered enterprise platforms using Agile/Scrum.

Full Stack Engineer – Roundtrip Technologies | Dec 2019 – Feb 2021

Frontend Developer – Beehive BI | Aug 2018 – Dec 201

Frontend Developer – E-shop | Apr2015 – Aug 2018

Education

Bachelor of Game Design and Development (In Progress)

Torrens University Australia | Melbourne, Australia | 2024 – 2027

Robot_Dreams – Node.js Course (Score: 198/200) | 2021

Udemy – React Course | 2018

Feedback Loop – A3 Cycle

External validation as a system calibration tool.

Three feedback sources informed REV.03. Each is recorded with the action it produced – not just praise, but applied input.

// REVIEWER 01 – SENIOR PRODUCT DESIGNER · 8+ YEARS · TEL AVIV

"My first thought was that it doesn't look like a developer's portfolio – it looks like something a design studio would publish. The Blueprint metaphor isn't just a visual theme. It's a way of talking about craft. One typeface, confident hierarchy, the orange used as punctuation – not decoration. That restraint takes maturity. One note – the NDA case studies feel text-heavy compared to the rest. Even an abstract architecture sketch would give the eye somewhere to rest. Architects don't show photographs. They show drawings. Reads like a senior portfolio, not a student one."

// REVIEWER 02 – CTO & BACKEND ENGINEER · 15+ YEARS · TEL AVIV

"Looking at the portfolio website created by Kira, you begin to truly understand the meaning and value of good design. You can feel how the right combination of UX and UI turns a portfolio into a work of art, where every element is in its place, and the aesthetics feel natural and not overloaded. At the same time, the design doesn't just create an impression – it accurately and fully conveys the author's skills, creativity, and vision."

// REVIEWER 03 – CPTO & PRODUCT MANAGER · TEL AVIV

"The portfolio looks like a real product. That's rare for student work – most portfolios feel like Behance grids. The Experience master-detail pattern is the right call: it lets a hiring manager scan in 30 seconds or read for 10 minutes. Suggestion: add Live site links wherever possible."

Reflection

The system works. Now it scales.

// WHAT WORKED

- Blueprint metaphor unified every deliverable — website, PDF, resume, LinkedIn
- The website demonstrates the skills it claims, instead of describing them
- A2 teaser became A3's landing page — system absorbed it cleanly
- Iteration was visible (REV.01 → REV.02 → REV.03), not hidden
- 3 feedback sources from senior engineers informed REV.03

// CHALLENGES

- Balancing engineering depth with non-technical accessibility
- Visual consistency across web, PDF, resume conventions
- Writing case studies for NDA-bound work

// FUTURE ITERATIONS

- Custom domain · dark mode toggle
- Game-design integration (post-ANI203, T2 2026)
- Recommendations from past employers on LinkedIn

Creativity is not decoration. It is structured intention.
